## CAREER OBJECTIVE

Final-year Electronics and Communication Engineering student with a strong foundation in **electronics, sensors, industrial automation, IoT,** and programming, along with hands-on experience in sensor-based automation projects. **Aspiring Full-Stack Developer** with an interest in building practical, user-focused web applications. Skilled in technical communication, analytical thinking, problem-solving, and understanding customer requirements. Eager to combine engineering knowledge and software development skills to deliver effective technical solutions and contribute to organizational growth.

## EDUCATION

**Dayananda Sagar College of Engineering** — **2023 – Present**
*BE in Electronics and Communication* - ***CGPA - 6.51*** — *Bengaluru , Karnataka*

**MJ Activity Senior Secondary School** — **2021**
*Class XII (12th)* - ***Percentage - 79.2%*** — *Utraula , UP*

**MJ Activity Senior Secondary School** — **2019**
*Class X (10th)* - ***Percentage - 67%*** — *Utraula , UP*

## PROJECTS

**AR Based Indoor Navigation System** | Unity,ARCore,C,QR Code Scanning,A* Algorithm — **04 2026**

- Developed an **Augmented Reality (AR)** based **Indoor Navigation System** that guides users from a source to a destination inside buildings using **real-time AR directional arrows**, **QR code-based localization**, and the **A* shortest path algorithm** for accurate route calculation. The system enables intuitive indoor navigation by precisely identifying the user's current location through **QR code** scanning and dynamically displaying navigation cues in an AR environment, ensuring a seamless, interactive, and efficient user experience while improving **navigation accuracy** in complex indoor spaces..

**IOT based Lab Automation** | ESP 32,PIR Motion Sensor,DHT 11,Relay Module — **05 2025**

- Designed and implemented an **IoT-based smart lab automation system** using **ESP32, PIR motion**, and **DHT11** sensors to automate lighting and fan control based on occupancy and environmental conditions. The primary objective was to improve **energy efficiency, reduce manual intervention**, and enable **remote monitoring**. The system successfully achieved automated appliance control, seamless integration with existing infrastructure, and scalable **IoT-based smart monitoring.** .

**Designing My Portfolio** | HTML5, CSS3, JavaScript, Responsive Web Design — **08 2025**

- Designed and developed a responsive personal portfolio website to showcase my **skills, projects, education, and achievements** with a modern and user-friendly interface.

**Polygon Color Game** | NODE.js ,REACT.js, DOM Manipulation — **05 2025**

- Designed and developed an **interactive Polygon Color Game** using **react.js, node.js and DOM Manupulation**, allowing users to change polygon colors through mouse click events with real time click counter including reset functionality

## TECHNICAL SKILLS

**Core Concepts:** Data Structures and Algorithms, Object-Oriented Programming (OOP), DBMS
**Languages:** Embedded C, C++, React.js , Node.js , SQL
**Developer Tools:** VS Code, Keil uVision, MATLAB, Arduino IDE, Git
**Technologies:** ESP32 Microcontrollers (ARM, AVR), Arduino , Linux, Circuit Design, IoT

## CERTIFICATIONS/ACHIEVEMENTS

- Electronics/Coding Certification
- Microsoft Azure Certification
- MATLAB Onramp (MathWorks)
- Solved 50+ DSA problems
